I am a PhD candidate at the University of Oxford, working on AI and governance in decentralized social systems. My research investigates how AI systems reshape authority, trust, and decision-making in large-scale online communities. I combine empirical studies with system prototyping to design deployable, human-centered AI infrastructures. I have published in top-tier venues such as CHI and CSCW and received multiple awards. I am currently extending this work toward building AI systems for real-world governance and content moderation.
